|  | <p>Description</p> | <p>Liposomal doxorubicin comes in two form- PEGylated (Doxosome™) and non-PEGylated (Doxosome™-NP). Doxorubicin drug is pre-loaded into PEGylated liposomes (Doxosome™) using ammonium sulfate gradient and it is ready to be injected. Non-PEGylated liposomes (Doxosome™-NP) comes in three vial kit. Vial one is the liposome solution in an acidic buffer. Vial two is the basic solution that should be added to vial one in order to generate a pH gradient for loading doxorubicin drug and vial three is the doxorubicin solution that should be added to liposomes in pH gradient. Due to the pH gradient the drug will be remote loaded into the liposomes. Because of the fast leakage of the drug from liposomes made from unsaturated lipids, doxorubicin loaded liposomes should be used immediately after loading.</p> <p>Lengte : 804</p> <p>Let op, uw meta description zou tussen de 70 en 160 karakters (spaces included) moeten bevatten.</p> | | | | | | |
